

Specifies that the built site should be pushed to the `gh-pages` branch, which GitHub uses to serve GitHub Pages.

```
yaml
user_name: "github-actions[bot]"
user_email: "github-actions[bot]@users.noreply.github.com"
```

Sets the Git user name and email for the commit that will be created in the `gh-pages` branch.

```
yaml
## NOTE: uncomment below if using a custom domain
## cname: mydomain.com
```

A commented-out option that would create a CNAME file in the published site, required when using a custom domain with GitHub Pages.
